Kaspersky Professional Services
Health Check

"The first wealth is health", as the saying goes. The same goes for your security implementations. There's no point having everything of the best if it's not optimally installed and configured.

To get the most out of your Kaspersky cybersecurity investments, you need to know there are no weak spots waiting to cause problems down the line. This is why we recommend a regular Health Check to ensure that you meet the best cybersecurity practices and are always ahead of threats targeting your business.

Optimize your Kaspersky cybersecurity investments

Verify that your Kaspersky products and solutions are in optimal health with the Kaspersky Health Check service. Our experts will carry out a thorough review of your applications' settings, policies, thresholds and tasks, ensuring that everything is optimized for your environment.

There are three Health Check service options, of 2, 4 and 8 hours' duration - depending on your setup and the configurations and policies we'll be checking – and it's all done remotely. Following the audit, our experts will generate a detailed, comprehensive report with actionable recommendations on how to improve security and/or systems management efficiency.

A clean bill of health

By providing you with the specific, expert knowledge you need, your Kaspersky solutions will be optimized, disruption will be minimal and your security will be enhanced.

To find out more about the **Kaspersky Health Check service** – why it's a great idea, service requirements, the full scope of work, and to ask any questions, contact us now.

Kaspersky Professional Services –
Maximize your cybersecurity investments. Optimize your protection.
